The Sock Industry

The textile industry is one of the leading industries in the Thailand. It was in fact the biggest industry until the electronic industry became Thailand biggest moneymaker. However the textile industry remains this country's second largest sources income. A significant portion of this revenue is generated by the production of socks.

The manufacturers of socks in Thailand have been produced of socks for more than 40 years. During this time they have witnessed a steady expansion of the sock making industry around the world, which has resulted in increased competition and less profits. In order to survive in such a competitive industry, it is critical for Thailand socks maker to develop more effective machinery capable of producing more socks and more effective operation, which enable the plant to be run for less cost. Thus, Thailand has been able to sustain competitiveness and maintain its position as a leading producer of socks in the world.
